

Form detail

#89: L2 Infra GSMDF Special Condition: OSE Can (Mixed Mounting Surface) — No Cable Required

Location	RPL10 / CAMPUS
Form date	Apr 6, 2026
Description	L2 Infra GSMDF Special Condition: OSE Can (Mixed Mounting Surface) — No Cable Required
Due date	Apr 6, 2026
Created	—
Status	Past Due

1. First Of Kind Details

1.1 First Of Kind Description	Fiber Splicing / Fiber Breakout Enclosures
1.2 Date	Apr 6, 2026
1.3 Installing Trade Partner	Telecom Contractor
1.4 Building ID	RPL10 / CAMPUS
1.5 Room Location	GSMDF1

2. Reviewing Parties

2.1 Trade Partner Representative	Yes
2.2 GC Representative	Yes

3. Benchmark Review and Acceptance

3.1 Visual — First Of Kind Details	N/A
3.2 Material Compliance	N/A
3.3 Benchmark installation complete & acceptable	N/A
3.4 Items needing improvement clearly noted	N/A
3.5 Released as constructed (no exceptions)	N/A

3.6 Record and Comments

FOK – OSE CAN MIXED MOUNTING SURFACE

At locations where OSE cans are installed in confined or delicate spaces, the mounting method will accommodate split surface conditions while maintaining structural integrity and alignment.

For this condition, the left half of the OSE can be secured directly to sheet metal, and the right half will be secured to Unistrut. The Unistrut will be mechanically fastened to the structural frame using appropriate hardware and supported with L-brackets to ensure rigidity and load distribution.

The Unistrut assembly will be installed plumb and level prior to mounting the OSE can, with all L-brackets fully secured to prevent flex or movement. All connections between Unistrut, brackets, and frame will be tightened and verified before can installation.

The OSE can be positioned so that the top of can remains at exactly 6'-0" AFF, consistent with FOK standards. Care will be taken to ensure the enclosure is not twisted or stressed due to the mixed mounting surfaces.

All fasteners into sheet metal will be appropriate for the material and installed flush and tight to prevent deformation or loosening over time.
